

ZScaler update

zscaler

New Version, New Script

ZScaler is now updated in the Apple App Store as version 1.8.1. [The update is automatic \(pushed to all devices\).](#)

Along with this, we pushed a script that should enable zscaler to sign on without the need to open the application. Since the push last night, we've seen an additional 50,000 devices register and connect.

Here's to hoping many of the connectivity issues for parents that didn't click on z-scaler are resolved by this.

Reminder: If you have an iPad in your hands for troubleshooting, and Wi-Fi is available, update the OS to iOS 14.
